

RETAIL SALES DATA AGENT ASSIGNMENT

CHAMANGO FAITH – 2805001676

DATASET DESCRIPTION

The retail_sales_data dataset includes details of sales transactions at a retail store. It is utilized to examine product performance, customer behavior, and overall sales trends. Each row corresponds to a single sales event.

THE DATASET COLOUMNS AND WHAT THEY MEAN

The retail_sales_data dataset contains information about retail transactions and is used to analyze sales performance, customer behavior, and product trends. Each record in the dataset represents a single sales transaction made in the retail store. The dataset includes several columns, each with a specific purpose. The Transaction ID is a unique identifier for each sale, helping to track and distinguish individual transactions. The Date column shows when each sale occurred, which is useful for analyzing sales patterns over time. The Customer ID or Customer Name identifies the buyer and helps in understanding customer purchasing behaviour. The Product ID is a unique code assigned to each product, while the Product Name gives the actual name of the item sold. The Product Category groups similar products together, such as electronics or clothing, making it easier to analyze performance across different product types. The Quantity column shows how many units of a product were purchased in a single transaction. The Price represents the cost of one unit of a product, and finally, the Total Sales column shows the total revenue generated from each transaction, usually calculated by multiplying quantity by price.

QUESTION 1

QUESTION 2

QUESTION 3

The screenshot shows the Databricks interface. The top navigation bar includes 'Home', 'Learn', 'Workspace', 'Recent', 'Catalog', 'Jobs & Pipelines', 'Compute', 'Discover Data', 'Marketplace', 'SQL', 'SQL Editor', 'Queries', 'Dashboards', 'Gene Spaces', 'Alerts', 'Query History', 'SQL Warehouses', 'Data Engineering', 'Runs', 'Data Ingestion', 'AI/ML', 'Playground', 'AI Gateway', 'Experiments', 'Features', 'Models', and 'Serving'. The main area displays a workspace with a notebook titled 'What is being sold here, and which product categories dominate?'. The notebook content includes a table with columns 'Customer ID', 'Total Spending', and 'Transactions'. The table lists 10 customers with their total spending and the number of transactions. To the right of the notebook is a sidebar with 'About', 'Data', and 'Instructions' tabs. The 'Instructions' tab is active, showing general instructions for the workspace.

Customer ID	Total Spending	Transactions
CUST109	\$2,000	1
CUST089	\$2,000	1
CUST074	\$2,000	1
CUST124	\$2,000	1
CUST072	\$2,000	1
CUST093	\$2,000	1
